**Title:** System and Method for Finding and Serving  
Consumer Products Related Information to  
Consumers Using Internet-based Information  
Servers and Clients

I am looking for an Internet searching tool with a database linking trademarks and the universal resource locators (URL) for appropriate web sites. For example, a trademark could be associated with a main page, technical specifications page, corporate info page, career opportunity page, etc. This system would allow the user of a client program (web browser) to input a trademark (e.g. "Ford") and receive links to appropriate pages.
